

PROJECT CHARTER				
PROJECT NAME		DATE	AREA OF FOCUS	
ILC: Inconsistency License Checker		15.10.2021	New Online Tool	
BUSINESS CASE		SCOPE		
License incompatibilities happen when a project uses a source code file that is licensed under a non-compatible license with the license of the main repository. The Tool parses repositories to collect metadata about software licenses related to one specific package and their dependents libraries. License Checker detects license incompatibility if it exists. As an output, the tool returns the corresponding license graph.		IN SCOPE		OUT OF SCOPE
